

Tim Bell Road over Dry Creek Bridge Replacement

The project is currently in the preliminary engineering phase. The development of this project is 100% funded by the Federal Highway Bridge Program. The existing bridge was originally constructed in 1915 and has several significant deficiencies. The purpose of the project is to replace the existing bridge with a new, larger bridge sufficient to clear 100 year flood event. Project's construction is anticipated to start September, 2020.
