

Distribution Uniformity (DU) Testing Optimized

CURES new DU & ROI Estimator software may be used to evaluate PC and non-PC drip/micro, tape and undertree irrigation systems.

Measure in-field irrigation system performance and estimate potential \$/acre savings.

Know what you can save on water, power and fertilizer!

Improving DU can save real \$\$\$!

Coalition for Urban Rural Environmental Stewardship (CURES) is partnering with irrigation suppliers to roll out the new DU & ROI (Return on Investment) tool for California growers.

Growers can also access the tool for free from CURES' website (below). Or contact one of these irrigation suppliers to schedule an evaluation by their certified technicians using the DU & ROI Estimator tool.

Access the FREE software at www.curesworks.org/DU_ROI_Estimator
