

Information for Small Water Systems During a Power Shutoff

A water system depressurization can occur when a disruption, such as a power outage, causes a loss of continuous positive pressure that falls below 5 psi. A system depressurization can lead to health risks associated with drinking water contamination.

In the case of a system depressurization, contact Environmental Health, Local Primacy Agency (LPA) at:

Phone: (209) 525-6700

Email: rariess@envres.org; mkcook@envres.org; kquinn@envres.org

In Person: 3800 Cornucopia Way, Suite C, Modesto, CA 95358
and (if applicable) your water system's distribution operator.
