Phone: (209) 522-4098  
Turlock MAD: David Heft  
Phone: (209) 634-1234

## Mosquito Control Efforts in Stanislaus County

Stanislaus County health officials have announced mosquito surveillance and control activities are underway within the county. Residents are urged to play their part by eliminating standing water on their property and informing their local mosquito abatement district if they are being bitten by mosquitoes.

In 2015, there were 13 individuals diagnosed with West Nile virus (WNV) within Stanislaus County (no deaths were reported last year). The numbers of WNV human cases were down from 2014 in Stanislaus County (38 WNV cases, 2 deaths). In California, there were 783 human cases of the disease resulting in 53 fatalities according to CDPH in 2015.

Residents are urged to continue to report dead birds to the WNV State Hotline: 1-877-968-2473. Reports may also be made online at [www.westnile.ca.gov](http://www.westnile.ca.gov). Dead bird reports are an important tool for West Nile Virus detection, even if the bird is not picked up and tested. Lack of dead bird reports decreases the ability to detect higher risk locations.

Aerial surveillance photography targeting neglected swimming pools and other mosquito-breeding sources have been taken throughout the county. Mosquito Control staff continues ongoing inspections and treatments of these mosquito-breeding sources to try to eliminate mosquito populations and prevent the spread of diseases like West Nile Virus.

To date, the types of mosquitoes that can carry the Zika virus have **NOT** been detected in Stanislaus County. "There are no locally mosquito transmitted cases of Zika, Dengue or Chikungunya virus in California. We are actively trapping for the invasive species of mosquitoes that carry these diseases," states Lloyd Douglass, Manager of East Side Mosquito Abatement. "West Nile Virus, however, is in Stanislaus County and we urge people to take precautions to prevent mosquito bites." Mosquito Abatement Districts are requesting residents to report any day time biting mosquito in urban locations to aid in invasive species detection.

Help reduce the risk of contracting mosquito-borne diseases by following these guidelines:

- **Dump or drain** standing water. Mosquitoes prefer to lay eggs in stagnant water.
- **Defend** yourself against mosquitoes using repellents containing DEET, Picaridin, or Oil of Lemon Eucalyptus.
- Avoid being outdoors when mosquitoes are present, typically **Dawn** and **Dusk**.
- **Report neglected swimming pools** by calling your local mosquito abatement district. *Anonymous calls accepted.*

There are two mosquito abatement districts to serve residents in Stanislaus County. Residents north of the Tuolumne River should contact the Eastside Mosquito Abatement District at (209) 522-4098. Residents south of the Tuolumne River should contact the Turlock Mosquito Abatement District at [turlockmosquito.org](http://turlockmosquito.org) or (209) 634-1234.
