# HOW TO CALCULATE A REQUIRED MINIMUM DISTRIBUTION (RMD) AMOUNT

Required minimum distributions (RMDs) are the minimum amounts that account owners or beneficiaries must withdraw from their retirement accounts each year. Account owners generally must start taking withdrawals from certain retirement accounts when they reach age 73. Beneficiaries of qualified retirement accounts and nonqualified deferred annuities must begin taking distributions soon after inheriting the account or annuity. These accounts include traditional IRAs, SEP IRAs, and SIMPLE IRAs, as well as 401(k), 403(b) and 457(b) plans.

To learn more about how these tables are used to calculate RMDs for owners and beneficiaries or to view details on additional ages, check out our <u>in-depth RMD resource</u>.

<sup>1</sup> The IRS considers the premiums for traditional long-term care (LTC) insurance contracts to be a qualified medical expense that may be paid for or reimbursed from an HSA on a tax-free basis, subject to age-based limitations. LTC riders on life insurance have additional considerations. Consult your tax advisor for additional details.

<sup>2</sup> This is your adjusted gross income, plus nontaxable interest, plus half of your Social Security benefits.

<sup>3</sup> Additional catch-up contributions may be available for 403(b) participants with 15 or more years of service.

<sup>4</sup> In the last 3 years before retirement, 457 plan participants may be able to increase their elective deferrals if needed to catch up on missed contributions.
